Practical Insights into Electron Microscopy for the User...

MICROPROBE ANALYSIS OF BIOLOGICAL SYSTEMS

EDITED BY THOMAS E. HUTCHINSON AND ANDREW P. SOMLYO

This volume is the outgrowth of a conference held at the Battelle Conference Center in Seattle, Washington, in the summer of 1980. Representatives from the major laboratories in the field of biological microanalysis in the United States, England, Scotland, France, and Germany attended, and presented the latest findings, theories, techniques, and procedures of their laboratories. Numerous areas of research, not previously discussed at an open forum, were introduced and debated. This important work constitutes a state-of-the-art review of biological microanalysis, providing unique insights into details of recent research.

1981, 448 pp., $36.00 ISBN: 0-12-362880-6

FIXATION FOR ELECTRON MICROSCOPY

M. A. HAYAT

Examines in a detailed and practical fashion all aspects of cell and tissue preservation for both scanning and transmission electron microscopy. The author presents the effects of fixation on both eukaryotes and prokaryotes, including viruses. The chapters begin with basic data and conclude with the most recent and advanced information available. All aspects of chemical fixation methods are covered, and the chemical reactions that govern the process of fixation are emphasized. Topics are presented in a sequence that coincides with the data required for the actual processing of specimens. The book considers the most commonly used fixation methods as well as their variations. These methods are clearly explained to permit their use by readers in their own experimental work. Both the advantages and limitations of each method are given, and a guide for recognizing and minimizing major artifacts and the most frequently encountered fixation faults is presented.

1981, 472 pp., $50.00 ISBN: 0-12-333920-0

ELECTRON MICROSCOPY OF PROTEINS

Volumes 1 and 2

EDITED BY J. R. HARRIS

These two volumes demonstrate the usefulness of electron microscopy in determining the structure of a wide range of proteins. The chapters review specific areas of research in which electron microscopy has contributed to our knowledge of cellular proteins and protein structure.

Profusely illustrated with high quality electron micrographs.

CONTENTS OF VOLUME 1: Arthropodan and molluscan hemocyanins. The nuclear envelope and the nuclear pore complex. Intermediate filaments. Protein synthesis in prokaryotes and eukaryotes: the structural bases. Glycoproteins. Coated vesicles. Cilia and flagella. Subject Index

CONTENTS OF VOLUME 2: Multienzyme complexes. Nonenzymic proteins. Bacterial appendages. Plasma lipoproteins. The fibrous proteins of connective tissue. High resolution electron microscopy of unstained, hydrated protein crystals. Specialized membranes. Subject Index

Volume 1: 1981, 366 pp., $72.00 ISBN: 0-12-327601-2
Volume 2: 1982, 326 pp., $61.50 ISBN: 0-12-327602-0

BIOMEDICAL RESEARCH APPLICATIONS OF SCANNING ELECTRON MICROSCOPY

Volumes 1 and 2

EDITED BY GISELE M. HODGES AND RICHARD C. HALLOWES

FROM A REVIEW OF VOLUME 1: "This multi-authored volume is the first of a series designed to review and evaluate the application of the SEM in the investigation of normal and pathological tissues and, hopefully, by stimulating further work, this series will, at last, help to elevate the SEM to the status of a reputable scientific instrument. . . . The first volume appears to be particularly useful to the newcomer to scanning electron microscopy for whom the largest problem must be deciding which preparative technique is suitable for the tissue or cell type to be investigated and which, at the same time, provides the required information. Each chapter scans the literature reviewing the techniques used for sample preparation, dehydration, drying, and coating while discussing the artefacts that can arise. The authors then interpret the published results in the light of their experience. . . . Comprehensive and stimulating and I recommend it as essential reading for any research worker or pathologist contemplating the observation of cell surfaces."—*Diana Newell in PROCEEDINGS OF THE ROYAL MICROSCOPICAL SOCIETY*

Volume 1: 1979, 374 pp., $86.50 ISBN: 0-12-351001-5
Volume 2: 1980, 326 pp., $66.00 ISBN: 0-12-351002-3

Journal of Molecular Biology

Important Changes

The *Journal of Molecular Biology* is 21 years old. Since it was first published, the Journal has been at the forefront of research in the field — helping to establish and define the boundaries of molecular biology. This year the journal has been restructured and its procedures revised, ensuring up-to-date and comprehensive coverage of the whole of this subject, which continues to develop with extraordinary rapidity.

Coverage — Traditionally, the journal has been strong in molecular genetics and mechanisms of replication and translation, as well as in biological structures. This tradition will be maintained, together with added coverage of cell biology — where the molecular approach is now achieving substantial results.

Structure — To give the reader quick access to papers of special interest, but to avoid dividing the journal into separate sections, papers in each issue will be ordered by subject areas. Thus, the field of genetics will be followed by cell biology and biochemistry and, finally, the physical chemistry and structure of biological macromolecules.

Editing —

Editor-in-Chief: J.C. Kendrew
Deputy Editor-in-Chief: S. Brenner

Genes — Gene structure. Gene modification. Gene expression. Gene regulation. *S. Brenner, P. Chambon, M. Gottesman*

Cells — Cell development. Cell function. *W. Franke, K. Simons*
— Organelle structures. Macromolecular assemblies. *H. Huxley, A. Klug*

Molecules — Macromolecular structure. *R. Huber, J. Kendrew*
— Physical chemistry. *M. Gellert*

Letters to the Editor —General. *S. Brenner*
— Preliminary X-ray data. *R. Huber, J. Kendrew*

Associate Editors: M. Bretscher, C. Cantor, G. Gilbert, V. Luzzati, M. Moody, S. Weissman

Each editor will assume individual responsibility for a particular field within the scope of the journal. This will be emphasised by a statement of identity at the end of each paper printed. Authors may now, if they wish, submit manuscripts to the Editor of their choice.

Speed — Wherever possible, the delay between receipt and publication of a paper will be reduced. Nevertheless, the journal's established standards of refereeing, editing, typography and reproduction will not be lowered.

Publication: 36 Issues per year
Subscription: Volumes 145-153, 1981
£331.20 (UK) £414.00 (overseas) $ 973.00 (overseas)

If you want to see the new JMB, write to Academic Press for a sample copy. This will include up-dated instructions to authors and a full editorial announcement.
